

# Marine Animals (Science – Food Chains)

## KS1

Within our oceans there is so much life. All the living things that live in the ocean depend on each other to stay alive. Food chains are a way we show how each animal gets its food and what it depends on to survive.

EDUCATIONAL RESOURCE

		
shark	turtle	phytoplankton
		
crab	kelp	sea lion
		
toothed whale	jellyfish	squid
		
manatee	small fish	baleen whale

Create as many food chains as you can using the plants and animals in the boxes above. Either cut the squares up and rearrange them, record written food chains or even have a go at drawing them yourself!

If you are unsure of what some of these animals eat, why not research and find out!
